

SPEECHMATICS

Public Cloud ASR

Our Public Cloud ASR provides transcription of pre-recorded audio from a public cloud operated and managed by Speechmatics. The transcription is provided after an audio file is passed to the Speechmatics engine provided within the cloud.

Transcription:

- Supports pre-recorded audio in many audio and video formats
- Transcripts provided in JSON, TXT format and over email
- It provides:
 - Words
 - Timing information for each transcribed word
 - Confidence score for each transcribed word
 - Sentence boundary information
- Diarisation available:
 - Provides the ability to detect and label speakers based on multiple speakers within the same channel
- Can be undertaken via a web application or via a programmatic API
- Operates in many regions across the world

Languages supported:

- 29 languages
- 46 languages available in the language lab section

Programatic use:

- RESTful API for transcription

Licensing:

- Free trial when you sign up
- Pay as you go model

Storage:

- The container image has a < 5 GB footprint per language
- No audio or transcripts are needed to be stored within the container

Performance:

- Transcript can be provided in better than 2x real time

Connectivity requirements:

- HTTPS port 443 needed to enable access to the Cloud

Administration:

- All administration of the cloud is managed by Speechmatics
