

SPEECHMATICS

Public Cloud ASR

Our Public Cloud ASR provides transcription of pre-recorded audio from a public cloud operated and managed by Speechmatics. The transcription is provided after an audio file is passed to the Speechmatics engine provided within the cloud.

Transcription:

- Supports pre-recorded audio
- Transcripts provided in JSON, TXT format and over email, containing:
 - Timing and confidence scores for each transcribed word
 - Sentence boundary information
- Diarisation available:
 - Speaker diarisation provides the ability to detect and label speakers within the same channel
- Can be undertaken via a web application or via a programmatic API
- Operates in many regions across the world

Languages supported:

- All 15 core languages available
- All 59 research languages available in the language lab section

Programmatic use:

- RESTful API for transcription

Licensing:

- Free trial when you sign up
- Pay as you go model

Performance:

- Transcript can be provided in better than 2x real time

Connectivity requirements:

- HTTPS port 443 needed to enable access to the Cloud

Administration:

- All administration of the cloud is managed by Speechmatics
